

RIOPAK ENGINEERS

ABOUT PAGE BLUEPRINT

Fabrecor-inspired editorial / industrial direction

DESIGN SYSTEM	CONTENT DIRECTION
Warm cream + deep black + Riopak orange. Oversized condensed typography. Full-bleed industrial imagery. Large whitespace. Minimal borders. Editorial composition.	Position Riopak as a packaging and processing machinery manufacturer focused on precision, reliability, flexibility, control and practical customer support.

REFERENCE

Use the Fabrecor Webflow template as the visual reference: large editorial headings, image-led sections, oversized statistics, industrial photography, asymmetric layouts and restrained orange accents. The About page should feel like the same design family as the completed Riopak homepage.

CONTENT SAFETY

Use only Riopak facts that are verified. Do not carry over the construction-company history, awards, public-company claims, placeholder statistics or other template residue currently visible on the old Riopak About page.

01 — PAGE ROLE

The About page explains what Riopak engineers, how it approaches packaging problems and why customers can rely on its machines.

PRIMARY MESSAGE

Riopak Engineers designs and manufactures packaging, filling and weighing machinery for accurate, efficient and reliable production.

The page should move from **who we are** → **what we engineer** → **how we work** → **what makes us dependable** → **where our solutions are used** → **contact / quote**.

ABOUT PAGE FLOW

01	CINEMATIC ABOUT HERO	Brand statement + machinery image
02	WHO WE ARE	Short company introduction + visual
03	ENGINEERING APPROACH	Precision / reliability / flexibility / control
04	WHAT WE ENGINEER	Capabilities and machine categories
05	HOW WE WORK	Requirement → engineering → build → support
06	WHY RIOPAK	Key differentiators
07	INDUSTRIES	Applications across target sectors
08	PROOF / TRUST	Verified client proof or restrained placeholder
09	FINAL CTA	Get a quote / contact the team

02 — 01 — CINEMATIC ABOUT HERO

LABEL

ABOUT RIOPAK

HERO HEADING

ENGINEERING PACKAGING PERFORMANCE.

SUPPORTING COPY

Riopak Engineers designs and manufactures packaging, filling and weighing machinery built around accuracy, reliability and the production requirements of every customer.

DESIGN

Use a full-width cinematic packaging-machine image or video. Keep the left side relatively dark so oversized typography remains readable. Use warm orange highlights on stainless-steel machinery. The heading is huge, condensed, uppercase and off-white, with one selective Riopak-orange accent.

CTA

PRIMARY: GET A QUOTE → SECONDARY: EXPLORE OUR MACHINES →

ANIMATION

Slow background scale/parallax. Heading reveals upward. CTA appears after the heading. No excessive effects.

03 — 02 — WHO WE ARE

HEADING

ENGINEERED FOR PRODUCTION. BUILT FOR RELIABILITY.

CONTENT

At Riopak Engineers, we design and manufacture high-performance packaging, filling and weighing machinery for businesses that need accurate, consistent and dependable production. Our solutions span pouch packaging, bottle filling, fillers, weighers and related automation, with configurations adapted to product and production requirements.

LAYOUT

Use a 55/45 asymmetric layout. Large machinery image on one side, editorial copy on the other. Add a small orange label such as **ENGINEERING APPROACH**. Keep generous whitespace and avoid a dense paragraph wall.

TRUST POINTS

PRECISION

Accurate filling, weighing, dosing and sealing for consistent production.

RELIABILITY

Industrial-grade construction and practical machine design for demanding environments.

FLEXIBILITY

Configurations can be adapted to products, pack formats and production needs.

CONTROL

PLC and HMI-based operation for practical machine management.

04 — 03 — ENGINEERING APPROACH

LARGE STATEMENT

PRECISION IN EVERY PACK.

SUPPORTING COPY

From accurate dosing and weighing to dependable forming, filling and sealing, every machine is designed around consistent production performance.

DESIGN DIRECTION

Use a dark full-width machinery image with oversized typography layered into the composition. Keep the copy minimal. Echo the homepage cinematic sections while remaining About-specific.

BENEFIT STRIP

01	ACCURACY	Controlled filling and weighing
02	DURABILITY	Industrial machine construction
03	FLEXIBILITY	Product and format adaptability
04	CONTROL	PLC + HMI-based operation
05	SUPPORT	Technical service and spares

05 — 04 — WHAT WE ENGINEER

HEADING

PACKAGING SYSTEMS BUILT AROUND THE PRODUCT.

VERIFIED CATEGORIES

VFFS MACHINES

Vertical Form Fill Seal systems for powders, granules, snacks, liquids, spices and other suitable products.

BOTTLE FILLING

Automated bottle filling solutions with configurable filling volume, sensors and optional capping.

FILLERS & WEIGHERS

Auger, volumetric cup, weigh and liquid-pump filling configurations depending on the product.

ACCESSORIES

Supporting components and automation accessories that complete the packaging workflow.

SERVICE & SPARES

Technical assistance and spare-parts support for continued machine operation.

INTERACTION

Use large image-led cards. Hover slightly scales the image, reveals an orange arrow and increases title contrast. On mobile, stack the cards vertically.

06 — 05 — HOW WE WORK

HEADING

FROM PRODUCT REQUIREMENT TO PRODUCTION.

PROCESS CARDS

01 REQUIREMENT

Understand the product, pack format, fill weight, container or pouch, production target and operating conditions.

02 ENGINEERING

Select the appropriate machine architecture, filling method, controls and configuration for the application.

03 BUILD & TEST

Manufacture, assemble and check the machine for dependable operation and required packaging performance.

04 INSTALL & SUPPORT

Support installation, commissioning, operation and ongoing service with practical technical assistance.

IMPORTANT

Do not claim a specific factory acceptance test, installation process, delivery guarantee, certification or project methodology unless Riopak has confirmed it. The workflow above is a design/content framework and should be aligned with the company's actual process before publication.

07 — 06 — WHY RIOPAK

LABEL

THE RIOPAK ADVANTAGE

HEADING

MORE THAN A MACHINE.

PRECISION	Controlled filling and weighing for consistent production.
RELIABILITY	Industrial machine construction designed for demanding environments.
FLEXIBILITY	Configurations suited to different products, pack formats and production needs.
CONTROL	PLC and HMI-based operation for practical machine management.
SUPPORT	Technical service and spares support for ongoing operation.

DESIGN

Use oversized benefit names, thin separators, orange numbering and subtle hover/scroll reveals. Avoid five rounded cards.

08 — 07 — INDUSTRIES WE SERVE

HEADING

PACKAGING SOLUTIONS ACROSS INDUSTRIES.

01	FOOD & BEVERAGE	→
02	AGRO PRODUCTS	→
03	SPICES & SEASONINGS	→
04	SNACKS & CONFECTIONERY	→
05	PHARMACEUTICALS	→
06	COSMETICS & PERSONAL CARE	→
07	DETERGENTS & WASHING LIQUIDS	→
08	CHEMICALS & FERTILIZERS	→

INTERACTION

On desktop, hovering an industry reveals a floating image on the right. On mobile, convert the interaction into expandable image rows. Keep typography large and the list uncluttered.

09 — 08 — PROOF / TRUST

HEADING

BUILT AROUND CUSTOMER REQUIREMENTS.

CUSTOMER TESTIMONIALS

If verified Riopak customer testimonials are available, use one large featured quote at a time with customer name, company and industry. If they are not supplied, keep a clean visual placeholder. Never invent a quote or customer identity.

CLIENT LOGOS

If the logos currently used on the Riopak site are genuine clients and approved for publication, retain them as a restrained 'Trusted by industry' proof strip. Use monochrome or low-contrast treatment so the section remains editorial.

STATISTICS

Do not reuse homepage statistics on the About page unless they are verified. Avoid placeholder figures and avoid template statistics such as 90%, 8K+, 24+ or 100% from the Fabrecor reference.

10 — 09 — FINAL CTA

HEADING

READY TO BUILD A BETTER PACKAGING LINE?

COPY

Tell us what you need to fill, weigh, seal or package. Our team can help identify the right Riopak solution for your production requirements.

PRIMARY CTA

GET A QUOTE →

SECONDARY CTA

CONTACT OUR TEAM →

DESIGN

Use a full-width Riopak machinery image/video with a dark overlay. Put the oversized heading on the left and the copy + CTA on the right. Use orange only for the primary CTA and small accents.

FOOTER

Use the same footer as the homepage so the site feels like one coherent system. Do not introduce a different footer design on the About page.

11 — SEO + PAGE CONTENT

SEO TITLE	Riopak Engineers About Us Packaging & Processing Machinery
META DESCRIPTION	Learn about Riopak Engineers, a Vadodara-based manufacturer of packaging, filling and weighing machinery designed for accurate, efficient and reliable production.
PRIMARY KEYWORD	packaging machinery manufacturer
SECONDARY TERMS	VFFS machines, bottle filling machines, filling machines, weighing machines, packaging automation, packaging machinery India
H1	ENGINEERING PACKAGING PERFORMANCE.
URL	/about-us/

SOURCE-BASED CONTENT NOTE

The current Riopak website describes the company as a manufacturer of packaging, filling and weighing machinery and lists VFFS machines, bottle filling, fillers/weighers, accessories and service/spares. It also describes applications across food, pharma, agro and industrial sectors. These facts form the safe foundation for this blueprint.

The current About page also contains obvious construction-template residue and unverified historical/metric claims. Those claims are deliberately excluded until Riopak confirms them.

FINAL DESIGN RULE

The About page must feel like Riopak: engineering-led, machinery-focused, precise, industrial and credible. The Fabreco reference supplies the visual grammar, not the business facts.
